

Raspberry Pi

Computer Programming Motivation

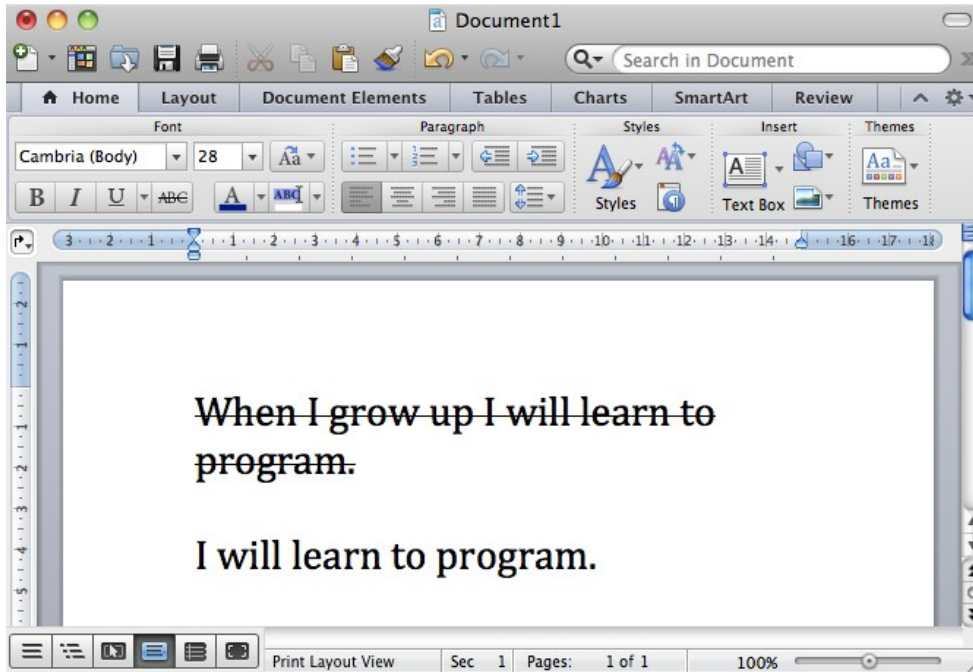

Raspberry Pi Day
University of Strathclyde
17/01/2015

The problem

- Difficult to teach programming at University
 - From 13 years of teaching C++ in Universities
 - Several years of teaching applied statistics to masters students
- Students often understand mathematical and scientific concepts, but find programming difficult.
 - Computers are needed for general solutions or complex problems.
 - Stuck when one cannot buy the software needed
 - Students that cannot program miss opportunities

GPIO Header & OS

Key

- Power (5 Volts)
- Power (3.3 Volts)
- Ground
- General Inputs/Outputs
- I2C Interface
- SPI Interface
- UART Interface
- ID EEPROM Interface

 +  = **Raspbian**

- Development:
- [Android](#)
 - [Debian](#)
 - [FreeBSD](#)
 - [Gentoo](#)
 - [NetBSD](#)
 - [openSUSE](#)
 - [Plan 9](#)
 - [Puppy](#)

Conclusions

- Need to reverse the decline in programming
- The Raspberry Pi provides a flexible solution
 - Allowing experimentation
 - Open OS & standard programming tools
