GEM Scotland 2012 Summary

- In three years, Scotland's TEA rate has moved from the fourth quartile to the second quartile of innovation-driven nations
- Migration patterns and income distribution differences account for a third of the persistent difference in TEA rates between Scotland and the UK
- Most of the recent increase came from graduates starting low aspiration businesses
- Issues for Scotland's innovation-based entrepreneurship ecosystem include exits for investors, effective connections, skills for growth, role of universities and role models/positive messages
