

Young Strathclyde: Accelerate

Chemistry Challenge

17th-21st June 2024

Accelerate is a one-week programme, held at the University of Strathclyde, for pupils who have just gone into S5 and S6. It aims to provide a targeted focus on the pupils' chosen area of academic interest, giving them a head start on the road to their chosen career.

There are nine areas that you can choose from in 2024, depending on your career aspirations:

- **Business**
- **Chemistry**
- **Chemical Engineering**
- **Computer Science**
- **Education**
- **Electronic & Electrical Engineering**
- **Law**
- **Politics**
- **Product Design**

Teams of academic experts have put together week-long Challenges in each of these areas that will allow pupils to find out all about their area of interest and the career opportunities open to them. Led by undergraduate and postgraduate student mentors from the relevant fields, pupils will undertake a variety of group challenges, as well as attending career workshops and getting a chance to see what student life is like.

The Chemistry Challenge: Outline

The Chemistry Challenge has three main aims:

- To provide you with insight and information about the various academic courses and work opportunities that there are in the field of Chemistry.
- To allow you to discuss career and education options with a wide variety of professionals and academics while being treated as a real University student for the week.
- To allow you to take part in group challenges that will allow you to put into practice the expertise in Chemistry that you will gain during the week.

University staff and current Chemistry students will act as your mentors throughout the week and will be on hand as a resource of advice and information.

You will work in groups in the chemistry lab, developing techniques for making and analysing the painkiller paracetamol. As well as making your own batch of the medicine, you will use the University's analytical chemistry instruments to analyse some paracetamol from over-the-counter medicines.

Students will also spend time looking at the health and safety issues involved in making a medicine and how safe paracetamol is for humans.

By allowing you to take part in the production and analysis of real medicine and find out more about Chemistry's role in the world, we are sure that this challenge will make you feel much more enthusiastic about studying Chemistry in school and going on to study at University.

Our Chemistry careers and industry presentations, will also allow you to see the future opportunities available to you and the whole week will offer you a taste of what it is really like to be a University student.

The Chemistry challenge has official accreditation on the SCQF Framework. This means that there will be some assessment on this challenge and, should you pass this, you will gain 5 credits at level 7. Level 7 is the same as Advanced Higher or first year University work.

What previous Chemistry Challenge participants have said about the programme:

"I thought it was a great experience and helped me learn more about what it's like being a university student and what studying chemistry at university would be like."

"I have developed my knowledge/ skills in chemistry which will be useful for school and hopefully a career in chemistry or a chemistry related career."

"I believe the Accelerate Chemistry programme was an amazing way to meet new people, have fun and learn about chemistry."

"I thought the Accelerate Chemistry programme was a great experience, where I learned lots of new chemistry skills that I can apply to the next year of school."
