

Intelligent decision support for through-life nuclear asset management

Dr. Graeme West

Department of Electronic and Electrical Engineering

graeme.west@strath.ac.uk

Presentation Overview

Industrial Informatics: Overview of intelligent decision support

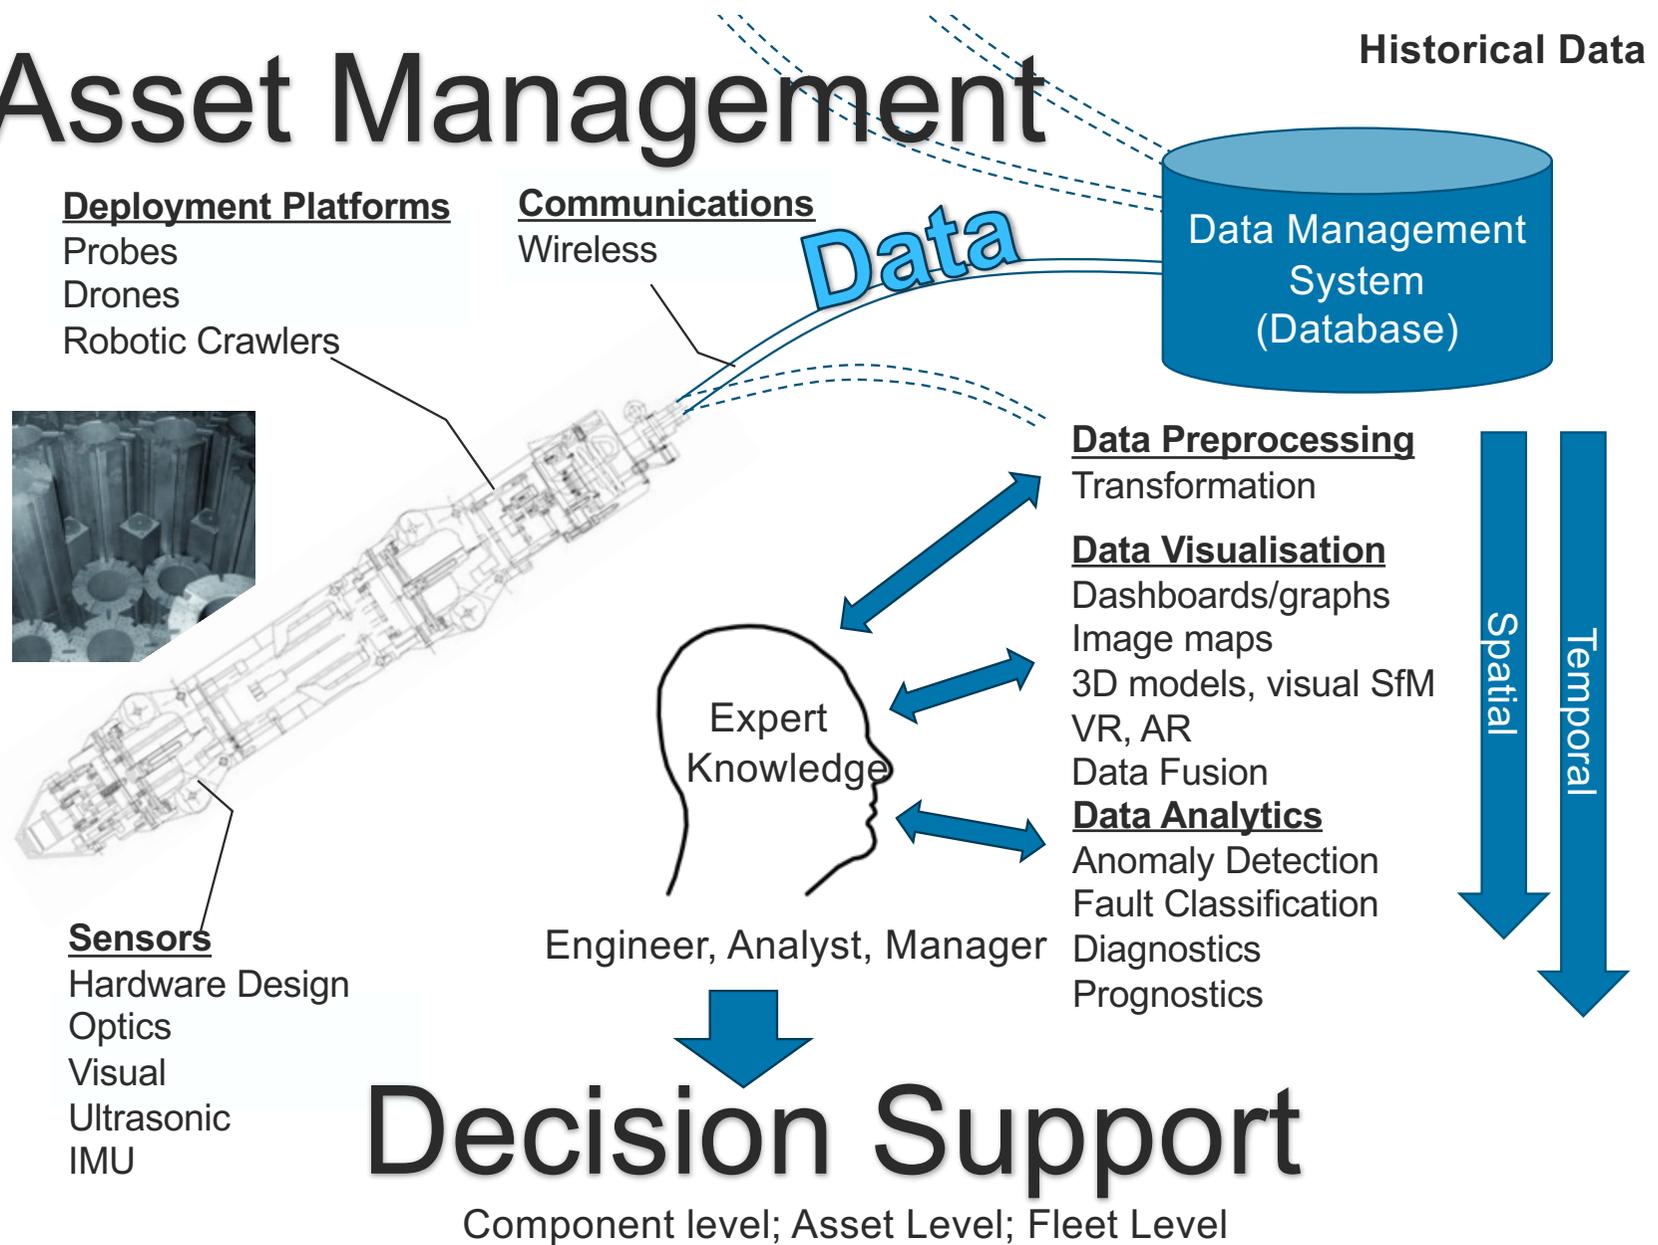

Reflection: Development & Deployment of Industrial Informatics

Future look: Opportunities for engagement

Challenges

- Continued and extended operations of reactors, plant & equipment that was constructed and commissioned over 40 years ago
- Key decisions on plant health & return to service reliant on limited but highly experienced individuals
- Assets complex and specialised (often one-off or limited numbers)
- Decisions lie on critical outage path
- Safety-critical environment – decisions require justification and explanation
- Instrumentation and control systems have been modernised, but associated analysis process lagging behind
- Digital technologies can provide significant benefits

Asset Management

Industrial Informatics

Deployment Platforms

- Probes
- Drones
- Robotic Crawlers

Communications

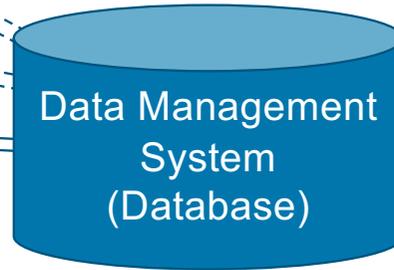

- Wireless

Sensors

- Hardware Design
- Optics
- Visual
- Ultrasonic
- IMU

Data

Historical Data

Data Preprocessing

Transformation

Data Visualisation

- Dashboards/graphs
- Image maps
- 3D models, visual SfM
- VR, AR

Data Analytics

- Anomaly Detection
- Fault Classification
- Diagnostics
- Prognostics

Engineer, Analyst, Manager

Decision Support

Component level; Asset Level; Fleet Level

UK-based Projects

Superheater Inspections

Control Rod Monitoring

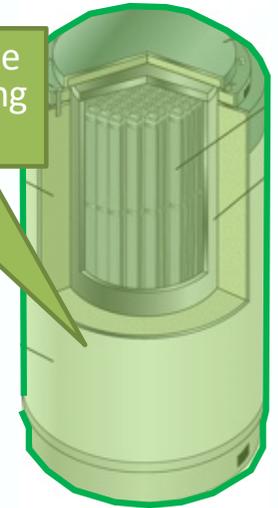

ASIST: Automated Stitching of TV Inspection images

Rotating Plant: Steam Turbines, Main Boiler Feed Pumps and Gas Circulators

IMAPS: Intelligent Monitoring Assessment Panel System

BETA: Automated Analysis of FGLT

Multipurpose waste canister monitoring at Sizewell B

Knowledge Models for Waste Classification

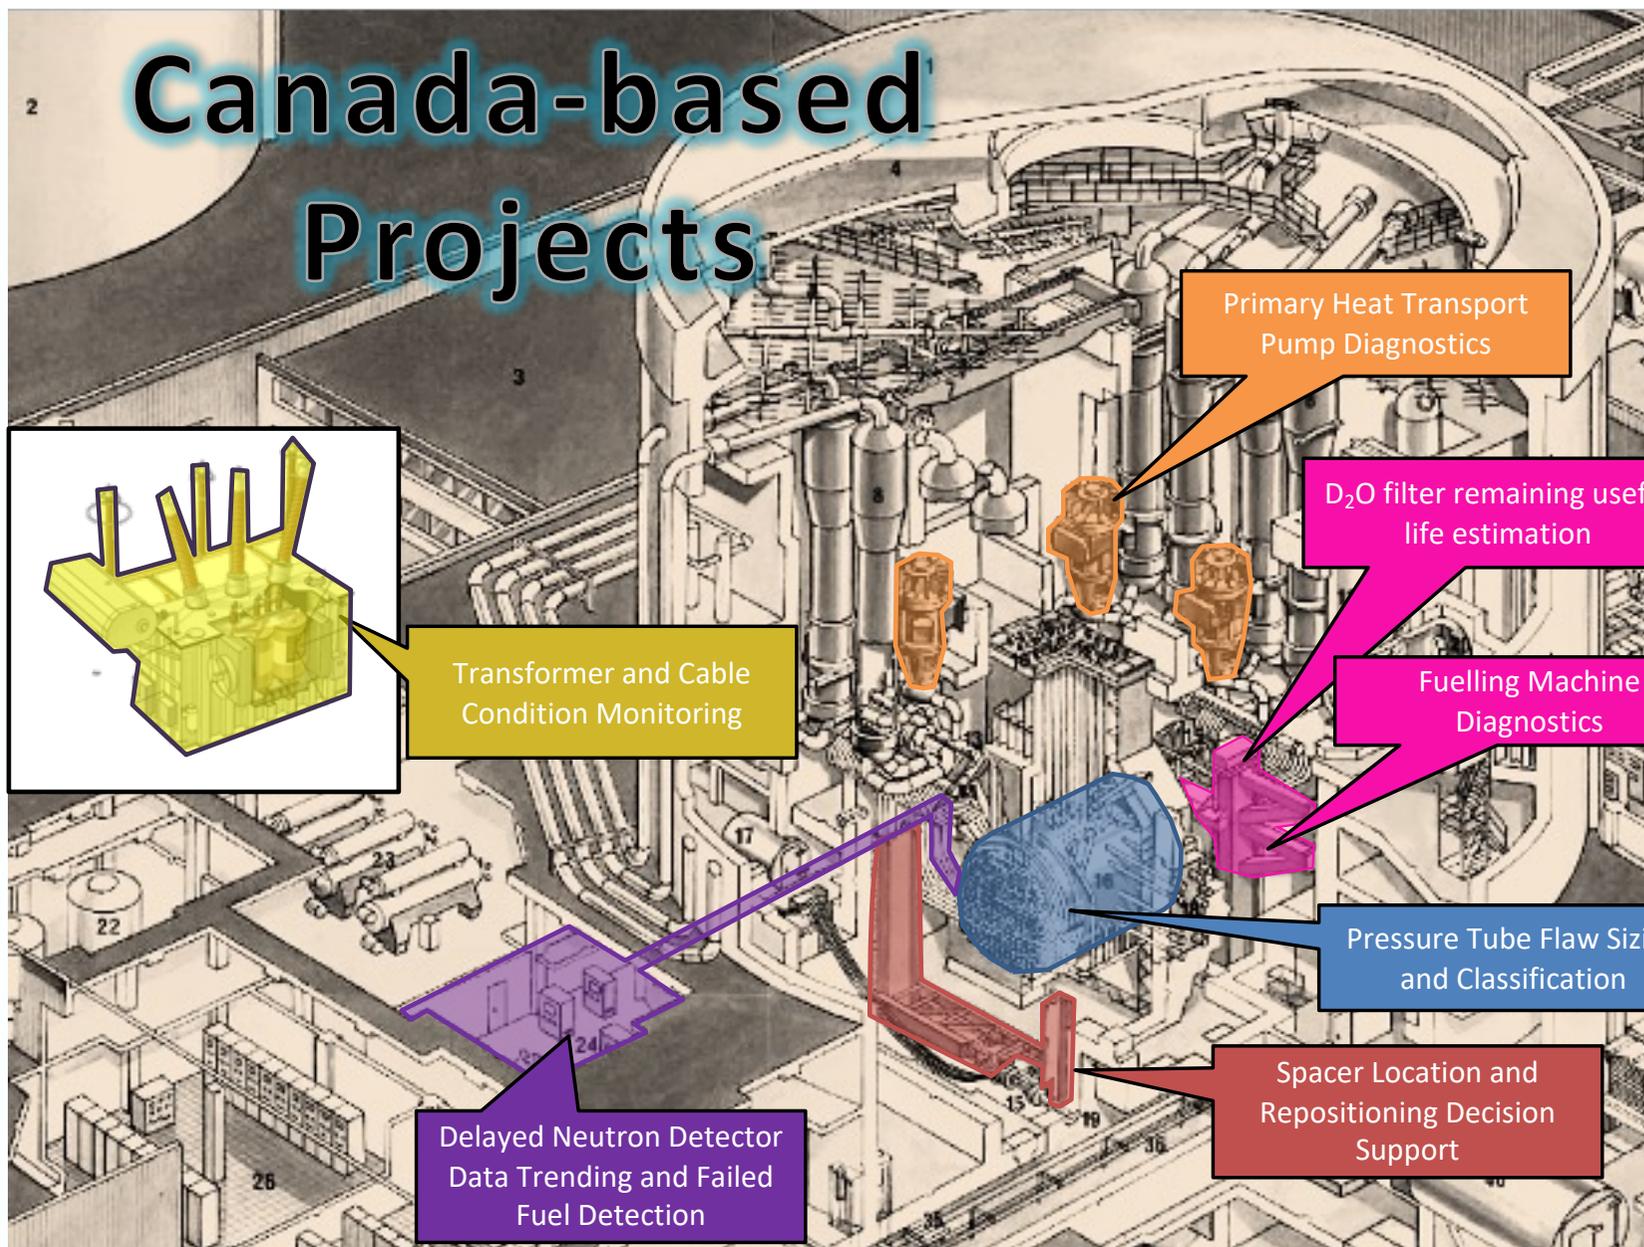

Waste Storage Vault Monitoring at Sellafield

Higher Active Waste (HAW) package inspection at MAGNOX

CESL Nuclear Engineering Wallchart

<http://econtent.unm.edu/cdm4/browse.php?CISOROOT=/nuceng&CISOSTART=1,1>

Canada-based Projects

Main Component Replacement Programme

Calandria Bore Tubesheet Inspection

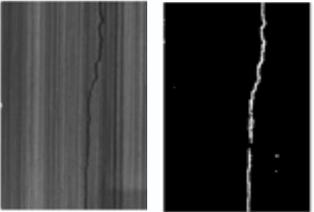

Knowledge Capture from Legacy Engineering Drawings

Common underpinning research

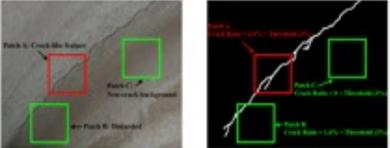

Visual Inspection

EDF ENERGY Pile cap hardware upgrade

EDF ENERGY Graphite crack detection

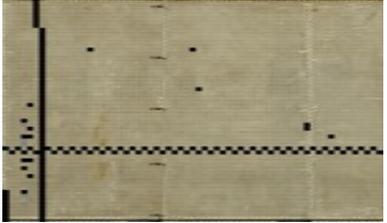

ALTRAD Superheater inspection

Sellafield Ltd
Vault monitoring

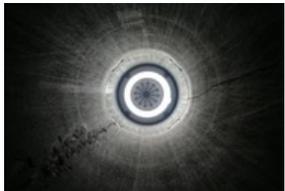

AGR graphite inspection **EDF ENERGY**

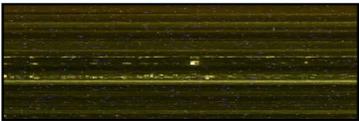

EDF ENERGY Waste Cannister inspection

EDF ENERGY Fly's Eye Camera

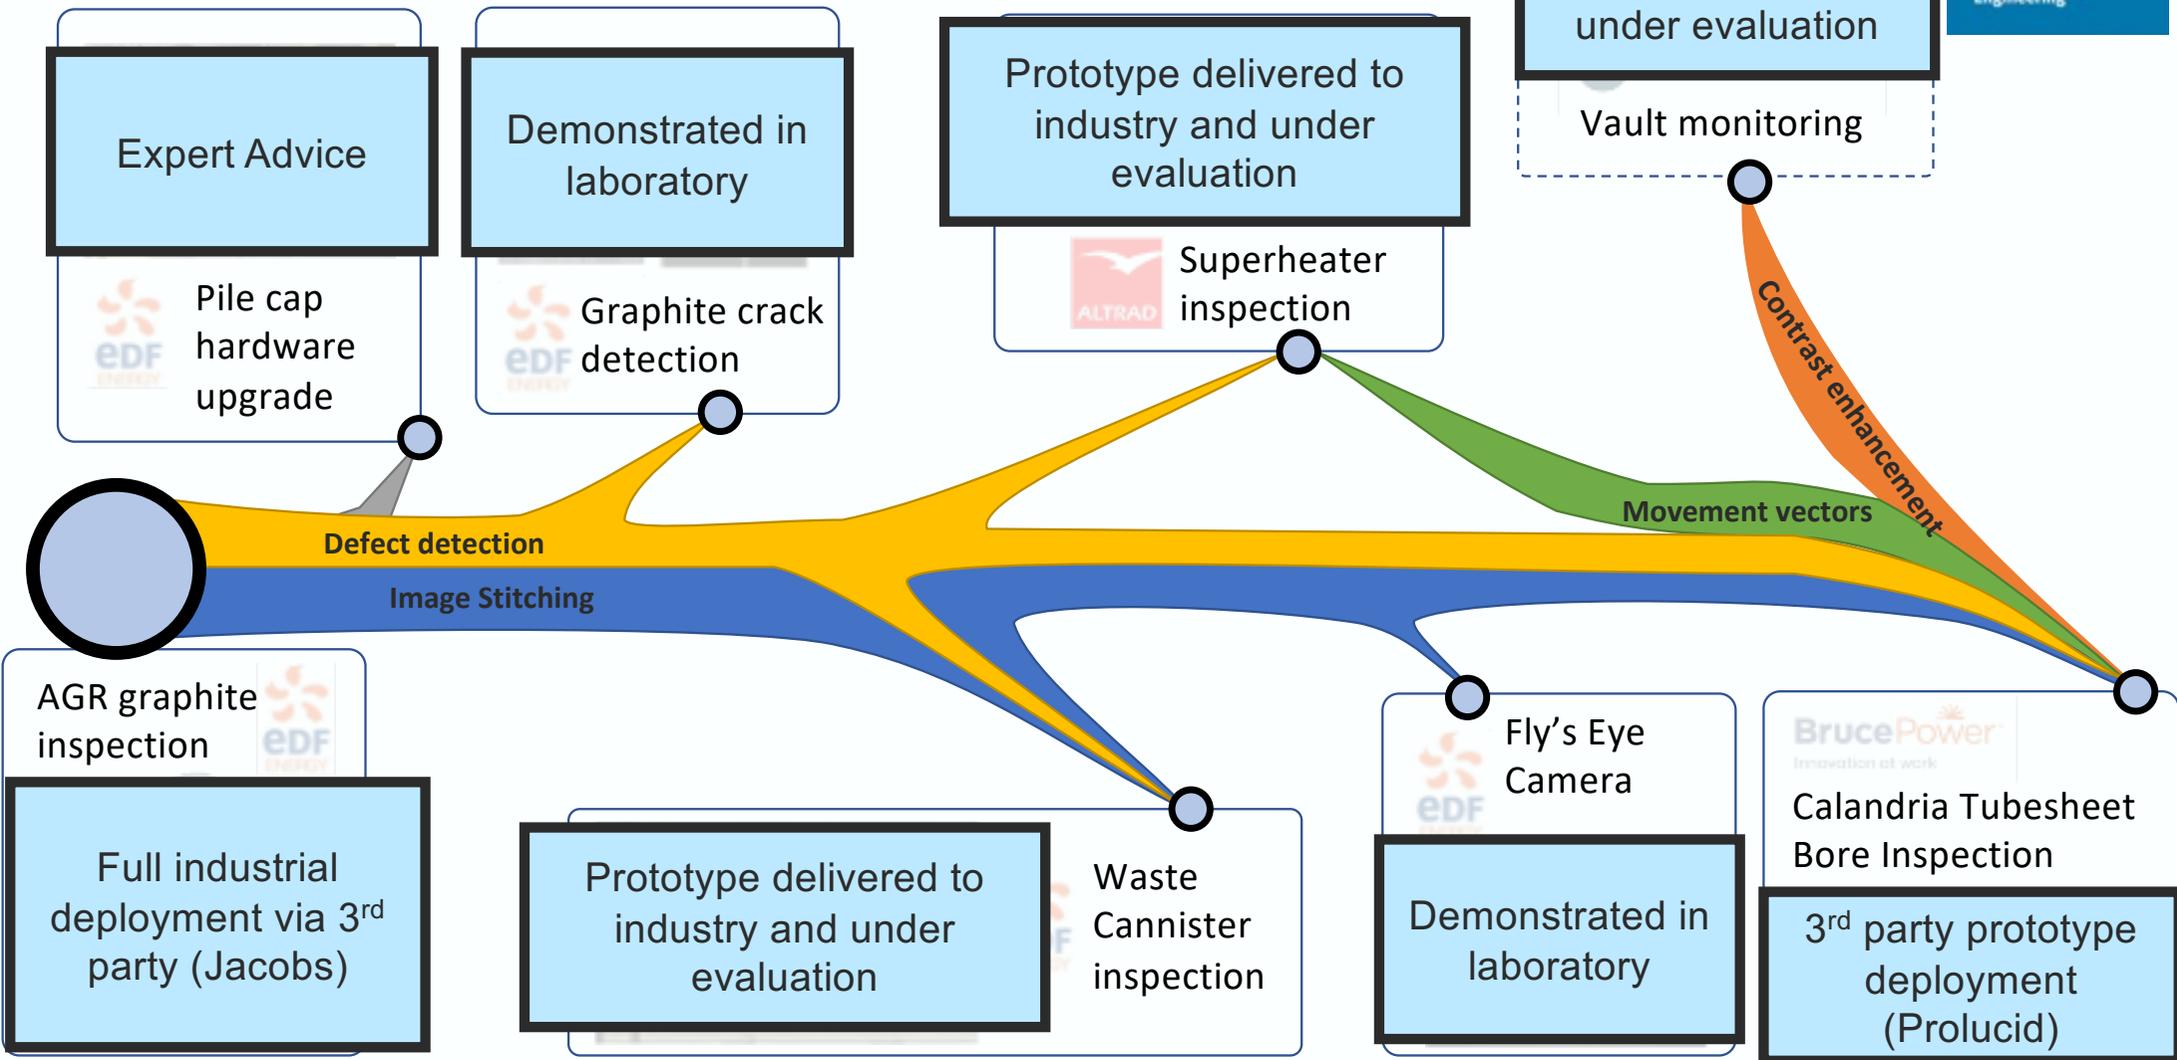

BrucePower
Innovation at work
Calandria Tubesheet Bore Inspection

Deployment Approaches

No "one size fits all"

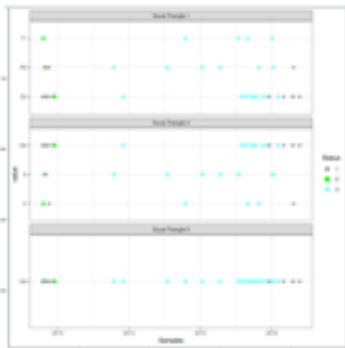

Deployment Approaches Power Transformers

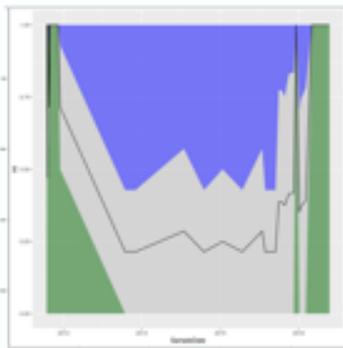

Deployed via
Bellrock
Technologies

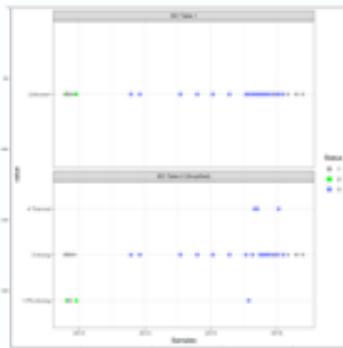

Deployed via
Ad-Astra

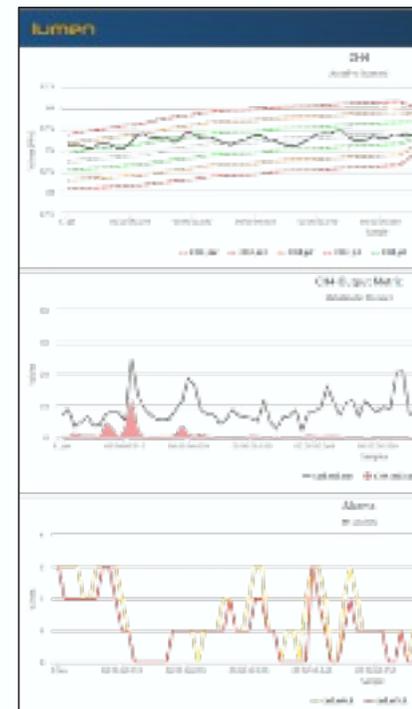

Duval Triangles 1-4-5

Health Index

IEC Diagnostic

Interpretable
Expectations

Traceable Metric

Summarising Alarm
Level

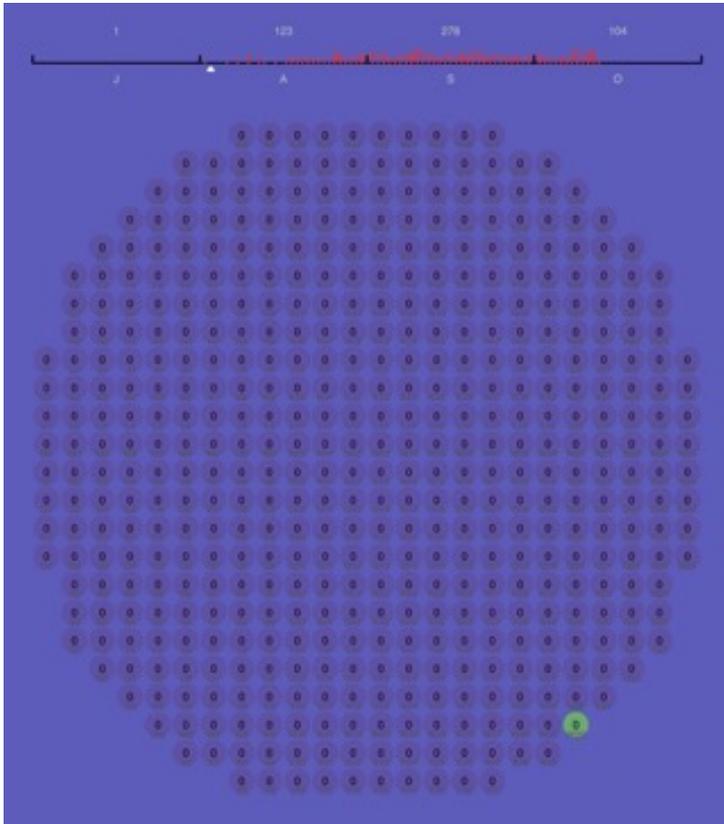

Accelerated Translation Calandria Tubesheet Bore Inspection

- Re-use of existing software approaches
- Lab demonstrations within weeks
- Accelerated development with 3rd Party industry support (Prolucid)
- First version of software to be delivered in 6 months to Bruce Power

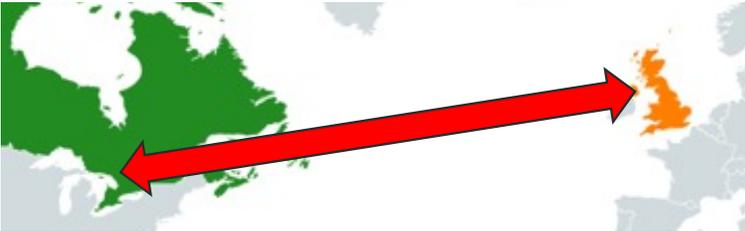

Information Redacted

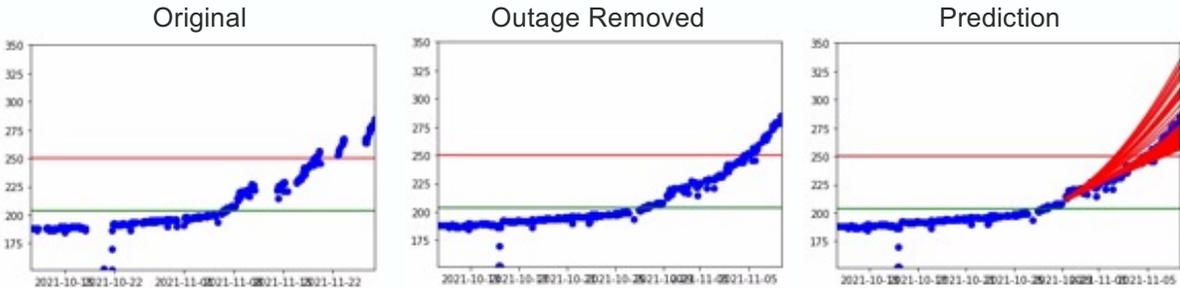

Common Platforms

Remote deployment of algorithms for evaluation on desktop

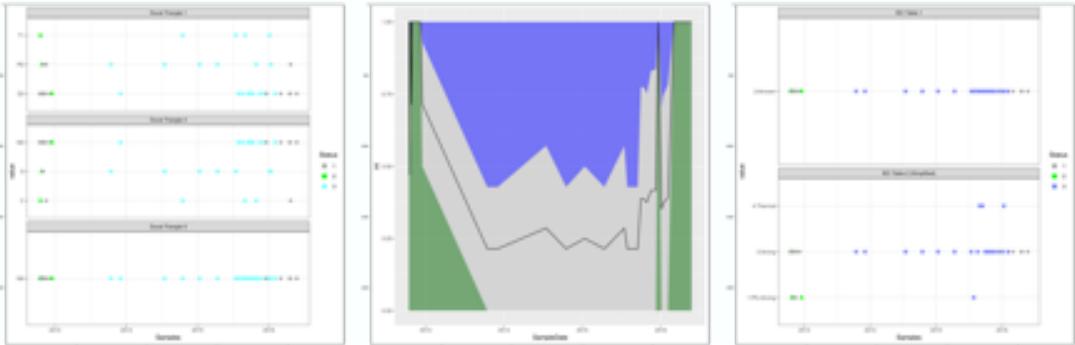

- Secure connection
- Algorithms developed at Strathclyde
- Deployed via Ad-astra (Microsoft Azure)
- Sandbox environment with local upload of operational data

Deuterium Filter RUL Prediction

Dissolved Gas Analysis

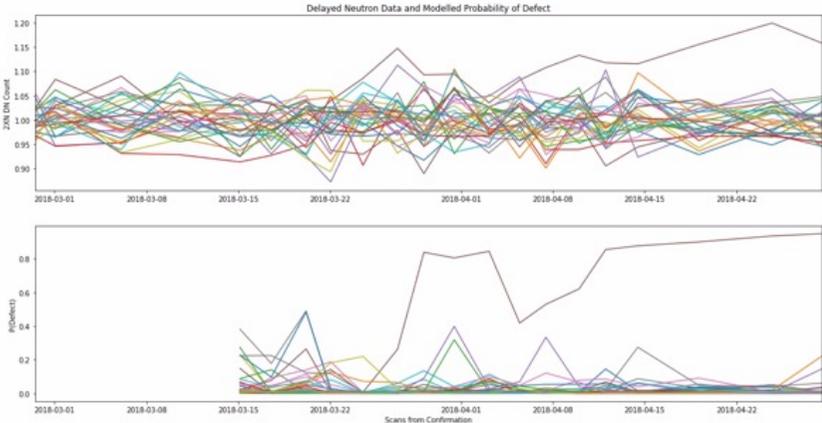

Duval Triangles 1-4-5

Health Index

IEC Diagnostic

Delayed Neutron (DN) Analysis

Future Direction

Decision Support: Regulatory acceptance of AI/ML

- Automating knowledge elicitation and knowledge validation
- Human in the loop; Legacy documentation
- Enhancing regulatory acceptance of automated tools

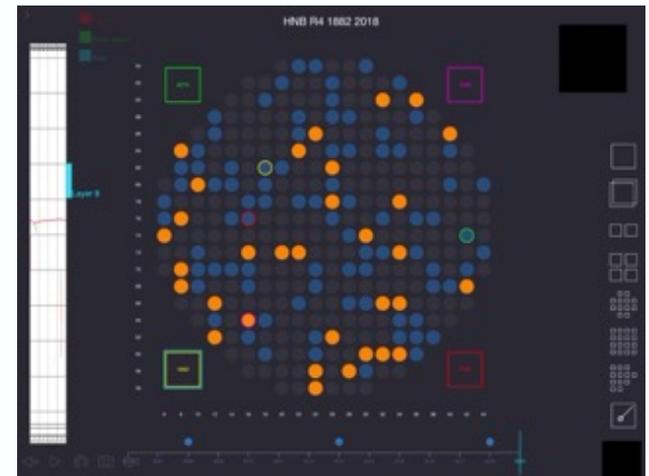

Intelligent Systems: Closing the physical and digital gap

- Moving human decision making into the digital world
- Capturing, representing and re-use human expertise
- Enhancing asset knowledge and uptime

**Applications:
Operating
Infrastructure**

**Explainable &
Regulatory Approved AI**

Enhanced Digital Twins

Summary & Opportunities

- Large portfolio of projects
- Common underlying research threads
- Multiple routes to deployment – demonstrated and in use in industry
- Thank you – any questions?
