10 Module Credits

#### **Module Details**

##### **Module Description**

The module aims to develop an appreciation of both the difficulties faced by preparers, auditors and standard setters in ensuring that a set of accounts gives a true and fair view and to develop an awareness of the extent to which academic research can guide and illuminate this process. The module achieves this aim through the systematic analysis of auditing regulations and practical applications, in a context of institutional and cultural factors, and through exploring research into aspects of auditing, with a view to analysing the policy issues facing those who regulate and those who apply audit.
