MODULE DESCRIPTION FORM

DEPARTMENT OF MECHANICAL AND AEROSPACE ENGINEERING

16363 (16366 Sem1 / 16367 Sem2) ENGINEERING ANALYSIS 3

Module Registrar: Dr Marco Fossati marco.fossati@strath.ac.uk	**Taught To (Course): Cohorts for whom class is compulsory / optional**		
Other Lecturers Involved: Dr Barbara A. Keating	**Credit Weighting: 20**	**Semester: 1&2**	
Assumed Prerequisites: MM117 Mathematics 1M; ME108 Engineering Analysis & Numerical Methods; ME209 Mathematical Modelling and Analysis	**Compulsory / optional**	**Academic Level: 3**	**Suitable for Exchange: Y**

Alternative codes and credit values for those taking only one semester:
Semester 1: 16366 Engineering Analysis 3 (Sem1) [10 Credits / ECTS 5]
Semester 2: 16367 Engineering Analysis 3 (Sem2) [10 Credits / ECTS 5]

Module Format and Delivery (HOURS i.e. 1 credit = 10hrs of study):

Lecture	Tutorial	Laboratory	Groupwork	External	Online	Project	Assignments	Private Study	**Total**
20	4	10					20	146	200

Educational Aim

This module aims to introduce the students to the theory and application of the two most widely used numerical methods in engineering analysis: the Structural Finite Element Method and Computational Fluid Dynamics.

Learning Outcomes

On completion of the module the student is expected to be able to:

LO1 Understand the basic theory of the Finite Element Method and Computational Fluid Dynamics (CFD);

LO2 Use FEM software ANSYS Workbench and CFD software FLUENT to solve various simplified practical engineering problems;

LO3 Understand how mathematics, numerical analysis and computing technology are combined to model and simulate the behaviour of physical systems.

Syllabus

The module will teach the following:

1st Semester: Mathematical modelling of engineering systems using the Finite Element Method: Theory and practice. Introduction to the commercial finite element program ANSYS Workbench; structural analysis; stress analysis.

2nd Semester: Partial derivatives and differential equations (PDE); Characteristics and domain of influence; Finite Difference method; Global error and convergence; Local truncation error and consistency; Stability; Conservation equations of fluid dynamics; Mathematical and numerical difficulties; Finite Volume method; Discretization of the domain; Semi-discrete form of the equations; High-resolution methods; Boundary conditions; Introduction to turbulence modelling.

Assessment of Learning Outcomes

Criteria

For each of the Module Learning Outcomes the following criteria will be used to make judgements on student learning:

LO1

C1 Understand energy method, displacement interpolation, element stiffness matrix, global stiffness matrix, boundary conditions, numerical solution procedure;
C2 Understand control volume, differential method and higher order method, recirculation zones/stagnation points, boundary layers;
C3 Understand procedure to solve structure and fluid problems numerically.

LO2

C1 Be able to use commercial FEM software to solve solid and structure problems;
C2 Be able to use commercial CFD software to create models and solve different types of fluid problems;
C3 Be able to obtain important results from commercial software through post processing.

LO3

C1 Understand how to simulate the behaviour of a physical system by transferring the practical problem into a mathematical model and using suitable numerical methods to solve the problem with a computer;
C2 Be able to know the types of error in numerical analysis and how to improve the accuracy of numerical results.

The standards set for each criterion per Module Learning Outcome to achieve a pass grade are indicated on the assessment sheet for all assessment.

Principles of Assessment and Feedback
(within Assessment and Feedback Policy at: https://www.strath.ac.uk/staff/policies/academic/)

Each student may receive advice concerning practical computer analysis workshops through the class forum.

Rubric feedback on the assignment will be provided to each student 3 weeks after the submission date. The questions raised by students will be collated and discussed in a subsequent class meeting.

A special session may be organised to provide sem1 exam feedback to all students. The exact date, time and place of the session will be advised in advance.

Assessment Method(s) Including Percentage Breakdown and Duration of Exams *(individual weightings)*

Examination				**Coursework**		**Practical (lab sessions)**		**Project**	
Number	Month(s)	Duration	***Weighting***	Number	***Weighting***	Number	***Weighting***	Number	***Weighting***
1	Dec (online)	1hr	25%	1 (s1)	20%	4 (s1) 4 (s2)	5% 5%		
1	Apr/May	2.5hr	45%						
* LO1, L02, LO3				* LO1, LO2		*LO2		* LO2	

* ***L/Os:*** *Indicate which Learning Outcomes (L01, L02, etc) are to be assessed by exam/coursework/practical/project as required.*

Coursework / Submission deadlines (*academic weeks*):
Semester 1 Week 7

Resit Assessment Procedures:
Submission of alternate^^ coursework prior to commencement of the August exam diet.

^^Students must contact the module Registrar for details as soon as results confirm that a resit is required.

PLEASE NOTE:
16366 (Sem1 10 credit module): Marks (totalling 50%) will be scaled to 100%
16367 (Sem2 10 credit module): Marks (totalling 50%) will be scaled to 100%

Students must gain a summative mark of 40% to pass the module. Students who fail the module at the first attempt will be re-assessed before the August diet. This re-assessment will consist entirely of coursework. No marks from any previous attempts will be transferred to a new resit attempt.

Date of Last Modifications: 31 August 2020

(form Updated August 2020)

MODULE TIMETABLE

Module Code:	**16363, 16366, 16367**	**Module Title:**	**Engineering Analysis 3**

Brief Description of Assessment:

Project work – 4 PC workshops each semester.
1st Semester assignment: 1 FEA modelling assignment: stress analysis.
1 Online Hour exam: December diet
2.5 Hour exam: April/May diet

Assessment Timing

Indicated on the table below are the start/submission dates for each assignment/project and the timing of each exam/assessment. Dropdowns may be left blank. Add extra notes below the dropdowns where relevant.

Please note: Timings can and will change, this should only be used as a guide.
