

MODULE DESCRIPTION FORM

DEPARTMENT OF MECHANICAL AND AEROSPACE ENGINEERING

16429 COMPUTER AIDED ENGINEERING DESIGN

Module Registrar: Dr Haofeng Chen haofeng.chen@strath.ac.uk	Taught To (Course): Cohorts for whom class is compulsory		
Other Lecturers Involved: Dr Marcello Lappa	Credit Weighting: 20 (ECTS 10)	Semester: 1 & 2	
Assumed Prerequisites: Computer literacy; students should have completed Engineering Analysis III (16363) or equivalent.	Compulsory class	Academic Level: 4	Suitable for Exchange: Y

Module Format and Delivery (HOURS i.e. 1 credit = 10hrs of study):

Lecture	Tutorial	Laboratory	Groupwork	External	Online	Project	Assignments	Private Study	Total
16	12	52					40	80	200

Educational Aim

This module aims to provide an appreciation of computer aided design, analysis and simulation methods over a range of engineering problems and to provide practical experience of the use of simulation and analysis software to design and investigate the behaviour and performance of specific systems or components.

Learning Outcomes

On completion of the module the student is expected to be able to:

- LO1 employ a finite element software effectively for the design of components and systems for linear and non-linear stress analysis.
- LO2 employ computational fluid dynamics (CFD) software effectively to treat real – world engineering problems.

Syllabus

The module will teach the following:

Section 1

Engineering problem solving using finite element analysis applied to a range of practical and industrially relevant stress analysis. Expanded usage of finite element analysis in linear elastic, non-linear and dynamic problems. Solid modelling, selection of boundary conditions, practical modelling, verification of models and analysis, post-processing and checking of results. Dynamics: Modal and Harmonic Analysis. Nonlinear limit analysis. Fatigue Analysis.

Section 2

Fluid dynamics problem solving using finite volume and finite differences methods. Illustration of the critical links existing between purely theoretical CFD aspects and common industry-leading software packages and related “options” (solution methods, numerical schemes, resulting accuracy, turbulence models, etc.). Utilisation of commercial CFD software for the effective solution of practical problems (e.g. external or internal turbulent flow; heat and mass transfer problems in plants, etc).

Assessment of Learning Outcomes

Criteria

For each of the Module Learning Outcomes the following criteria will be used to make judgements on student learning:

LO1

- C1 Describe the software tools being used for structural analysis, highlighting their advantages and disadvantages.
- C2 Develop a modelling strategy (highlighting assumptions) and select appropriate idealisations which are compatible with the objectives of the analysis and simulation being undertaken.
- C3 Employ an analysis and simulation system to achieve the objectives of the task set and to validate the results obtained as far as practical.
- C4 Demonstrate sound engineering judgement and effective communication skills.

LO2

- C1 Describe the software tools being used for fluid dynamic analysis, highlighting their advantages and disadvantages.
- C2 Develop a modelling strategy (highlighting assumptions) and select appropriate idealisations which are compatible with the objectives of the analysis and simulation being undertaken.
- C3 Employ an analysis and simulation system to achieve the objectives of the task set and to validate the results obtained as far as practical.
- C4 Demonstrate sound engineering judgement and effective communication skills.

The standards set for each criterion per Module Learning Outcome to achieve a pass grade are indicated on the assessment sheet for all assessment.

Principles of Assessment and Feedback

(within Assessment and Feedback Policy at: <https://www.strath.ac.uk/staff/policies/academic/>)

Students are provided with marking schedules which provide an indication of marks assigned and performance required and the marking schedule also provides an indication of the challenges and where effort is best employed.

There are generally 2-4 hours of manned laboratory sessions per week and students who attend have ample opportunity for feedback on progression. In addition, on release of coursework marks, students have the opportunity to seek further feedback. Students therefore have the opportunity to improve over the 2 assessed elements.

The significant laboratory content also provides students with the opportunity to develop and practice the required competences before summative assessment takes place. Two sections of the course involve the application of analysis and simulation software and feedback from one section should lead to improved performance.

The essence of the laboratory element is interaction and dialogue and discussion amongst students is also encouraged and while no formal opportunities for self-assessment exist, students are encouraged to reflect on their development during the laboratory element of the course.

Although there is a variation across the 2 course sections, students are generally engaged in the timing of assessment and also the topic in some cases. Marking schedules are also presented and discussed in some sections. While the assessment regime is laid down in the module descriptor, students are involved in the discussion and weightings of elements of the summative coursework in some sections of the course. Social integration during the learning process is much in evidence during the laboratory sessions.

The experience of using industry-leading application software on challenged and interesting problems (sometimes of the student's own choosing) is generally found to be highly motivational, and the achievement of competencies much in demand by industry can also improve self-esteem.

Staff involved in this subject hold a retrospective each year and share their own experiences with a view to updating the module and improvement of the student learning experience.

Assessment Method(s) Including Percentage Breakdown and Duration of Exams (*individual weightings*)

Examination				Coursework		Practical		Project	
Number	Month(s)	Duration	Weighting	Number	Weighting	Number	Weighting	Number	Weighting
				2	50% each				
*				* LO1 and LO2		*		*	

* **L/Os:** Indicate which Learning Outcomes (L01, L02, etc) are to be assessed by exam/coursework/practical/project as required.

Coursework / Submissions deadlines (*academic weeks*):

To be notified by class lecturer.

Resit Assessment Procedures:

Submission of alternate [^]coursework prior to commencement of the August exam diet.

^{^^}Students must contact the module Registrar for details as soon as results confirm that a resit is required.

PLEASE NOTE:

Students must gain a summative mark of 40% to pass the module. Students who fail the module at the first attempt will be re-assessed during the August diet. This re-assessment will consist entirely of coursework. No marks from any previous attempts will be transferred to a new resit attempt.

Recommended Reading

*****Purchase recommended **Highly recommended reading *For reference**

** Course notes and self-learning material provided.

** It is strongly recommended that students who have not completed 16363 in year three familiarise themselves with notes and learning from this class PRIOR to start of the semester. Notes for FEA shall be made available to students on Myplace site.

Additional Student Feedback

(Please specify details of when additional feedback will be provided)

Date	Time	Room No

Session: 2020/21

Approved:

Course Director Signature: Dr Stuart Grey

Date of Last Modifications: 10 September 2020

(Updated August 2020)

MODULE TIMETABLE

Module Code:

16429

Module Title:

COMPUTER AIDED ENGINEERING DESIGN

Brief Description of Assessment:

Two major coursework elements in the two distinct areas of the course, equally weighted.

Approximate timings of the courseworks are provided

Assessment Timing:-

Indicate on the table below the start/submission dates for each assignment/project and the timing of each exam/assessment using the dropdowns provided. Dropdowns can be left blank. Add extra notes below the dropdowns.

Please note: Timings can and will change, this should only be used as a guide.
