

MODULE DESCRIPTION FORM

DEPARTMENT OF MECHANICAL AND AEROSPACE ENGINEERING

16565 ENGINEERING COMPOSITES

Module Registrar: Dr S Manoli stella.manoli@strath.ac.uk	Taught To (Course): Cohorts for whom class is compulsory / optional	
Other Lecturers Involved:	Credit Weighting: 10	Semester: 2
Compulsory/ optional class	Academic Level: 5	Suitable for Exchange: Y

Required prerequisites

Note: It is the responsibility of ALL students to ensure that they satisfy the prerequisite knowledge for this module BEFORE adding as part of curriculum selection. If unsure, please contact the Module Registrar or discuss with your Programme/Year Adviser of Studies.

Some knowledge of materials and their properties.
Ability to work with vectors and matrices.
Ability to work with a spreadsheet and/or Matlab to aid calculations.

Module Format and Delivery (HOURS i.e. 1 credit = 10hrs of study):

Lecture	Tutorial	Laboratory	Groupwork	External	Online	Project	Assignments	Private Study	Total
20	7				2			71	100

Educational Aim

Composite materials are the optimised combination of modern materials that can provide outstanding properties. This module aims to give a basic understanding of modern composite materials and an appreciation of predictive modelling and design implications when composites are applied to engineering structures. The main composite manufacturing processes will also be outlined.

Learning Outcomes

On completion of the module the student is expected to be able to:

LO1 understand the relationships between the constituents, structure, properties and processing techniques of composites.

LO2 understand micromechanics, classical laminate theory and some of the complexities of laminated systems.

LO3 understand the fundamentals of manufacturing defects, machining and joining, failure mechanisms and damage limitation and repair.

L04 appreciate sustainability considerations and the development and use of SMART composites.

Syllabus

The module will teach the following:

Classification and definition of composites.

Fibres and matrices: fibre architecture; thermoplastic and thermosetting matrices.

Composite manufacturing: wet lay-up & compression moulding; filament winding & pultrusion; moulding (e.g. resin transfer moulding); pre-preg; choice of manufacturing route.

Micromechanics of a ply for weight and stiffness calculations as well as for strength calculation

3D constitutive equations and plane stress constitutive equations of a ply

Classical Laminate Theory, ABD matrices and coupling between strain terms

Composite failure mechanisms. Impact failure mechanisms & toughening of composites.
 Manufacturing defects. Machining of composites and joint design. Damage limitation and repair.
 Characterisation and NDT.
 SMART composites.
 Sustainability of composite materials and Life Cycle Assessment.

Assessment of Learning Outcomes

Criteria

For each of the Module Learning Outcomes the following criteria will be used to make judgements on student learning:

L01:

- C1: Demonstrate an understanding of composite constituents: fibres and matrices, and their properties.
- C2: The ability to critically evaluate manufacturing techniques and choose an appropriate manufacturing method.
- C3: Assessment of the mechanical performance of composites from the given properties of the constituents.

L02

- C1 Describe and calculate the response of composite laminae and laminates to external loading via laminate theory involving matrix construction and manipulation.

L03

- C1 Demonstrate an understanding of manufacturing defects, machining of composites and joining methods.
- C2 The ability to critically assess possible failure mechanisms and how failure can be prevented.

L04

- C1 Describe and explain developments in SMART composites and how sustainability considerations can be addressed.

The standards set for each criterion per Module Learning Outcome to achieve a pass grade are indicated on the assessment sheet for all assessment.

Principles of Assessment and Feedback

(within Assessment and Feedback Policy at: <https://www.strath.ac.uk/professionalservices/staff/policies/academic/>)

Please state briefly how these are incorporated in this module.

Immediate self-directed feedback through forums as well as during class discussions.

Feedback will be provided at regular tutorial sessions primarily through verbal discussion with individuals or groups on tutorial exercises attempted in advance by students (Note:- to receive this feedback students should participate in these tutorials but attendance is not mandatory).

Assignment feedback will be provided through a rubric or online marking guide.

Assessment Method(s) Including Percentage Breakdown and Duration of Exams (individual weightings)

Examination				Coursework		Practical		Project	
Number	Month(s)	Duration	Weighting	Number	Weighting	Number	Weighting	Number	Weighting
1	Apr/May	1.5hrs	65%	1	25%				
2	Online quiz	30mins each	10%						
* L01-L04				* L01-L04		*		*	

*L/Os: Indicate which Learning Outcomes (L01, L02, etc) are to be assessed by exam/coursework/practical/project as required.

Coursework / Submission deadlines (academic weeks):

Quizzes week3 & week 6; Coursework submission week 9.

Resit Assessment Procedures:

2hr examination in August diet.

PLEASE NOTE:

Students must gain a summative mark of 50% to pass the module. Students who fail the module at the first attempt will be re-assessed during the August diet. This re-assessment will consist entirely of an exam. No marks from any previous attempts will be transferred to a new resit attempt.

MODULE TIMETABLE

Module Code:

16565

Module Title:

Engineering Composites

Brief Description of Assessment:

Examination (65% of overall mark)
 2 computer based quizzes (via Myplace; 10% of overall mark), week 3 and week 6.
 Assignment (25% of overall mark) due in week 9.

Assessment Timing

Indicated on the table below are the start/submission dates for each assignment/project and the timing of each exam/assessment. Dropdowns may be left blank. Add extra notes below the dropdowns where relevant.

Please note: Timings can and will change, this should only be used as a guide.
