

# MODULE DESCRIPTION FORM

## DEPARTMENT OF MECHANICAL AND AEROSPACE ENGINEERING

### ME517 Space Flight Systems

Module Registrar: Prof M Vasile <a href="mailto:massimiliano.vasile@strath.ac.uk">massimiliano.vasile@strath.ac.uk</a>	Taught To (Course): Cohorts for whom class is optional and compulsory	
Other Lecturers Involved:	Credit Weighting: 10	Semester 2
	Academic Level: 5	Suitable for Exchange: Y

#### Required prerequisites

**Note:** It is the responsibility of ALL students to ensure that they satisfy the prerequisite knowledge for this module BEFORE adding as part of curriculum selection. If unsure, please contact the Module Registrar or discuss with your Programme/Year Adviser of Studies.

<p><b>Physics:</b> Fundamentals of kinematics and dynamics, forces and momenta, work and energy, equations of relative motion, thermodynamics, electromagnetism, basic concepts of orbital mechanics, Newton's theory of gravitation.</p> <p><b>Mathematics:</b> Fundamentals of linear algebra, vectors &amp; matrices, calculus, geometry</p> <p><b>Numerical Methods:</b> Solution of linear and nonlinear equations; integration of ordinary differential equations</p> <p><b>Programming:</b> Knowledge of basic programming principles:  <ul style="list-style-type: none"> <li>- manipulation of scalar, vectors and matrices variables;</li> <li>- use of operators, expressions and statements (including conditional statements);</li> <li>- algorithms, structured programming logic and flow diagrams;</li> <li>- computer arithmetic and errors.</li> </ul>                     Ability to construct flow charts to summarise key steps of a problem.                      Ability to develop and implement effective algorithms (MATLAB is the officially supported language/environment for this module, but the assignments and coursework can be done in any programming language).</p>
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### Module Format and Delivery (HOURS i.e. 1 credit = 10hrs of study):

Lecture	Tutorial	Laboratory	Groupwork	External	Online	Project	Assignments	Private Study	Total
20						50		30	100

#### Educational Aim

<p>This class is designed to provide an overview of spaceflight systems. An overview of the complete spacecraft lifecycle from objectives, through launch and operations is covered, along with the function and purpose of the spacecraft sub-system level components. In addition to the technical detail of spaceflight systems, the importance of ancillary skill-sets is introduced such as project management. Finally, the various elements of the class will be brought together through a semester-long project to develop a feasibility study of a space mission.</p>
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

#### Learning Outcomes

<p>On completion of the module the student is expected to be able to:</p> <p>LO1 An understanding of the sub-system level components on-board a spacecraft</p> <p>LO2 An understanding of the methods employed in spacecraft design</p> <p>LO3 The ability to develop a feasibility study of a space mission</p>
------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

## Syllabus

The module will teach the following:

- 1) Spacecraft (sub-)system
- 2) Spacecraft design and trade-offs
- 3) Spaceflight systems lifecycle
- 4) Space Mission Analysis and Design

## Assessment of Learning Outcomes

### Criteria

#### LO1-LO3

A clear understanding of each learning outcome must be communicated in project. The project will follow the normal review process of a real space mission. At each review the three learning outcomes will be assessed through a comprehensive presentation of the design solutions and the level of fulfilment of the mission requirements.

The ability to develop a project following the normal review process of a real space mission.

The ability to provide a comprehensive presentation of the design solutions and the level of fulfilment of the mission requirements

The standards set for each criterion per Module Learning Outcome to achieve a pass grade are indicated on the assessment sheet for all assessment.

### Principles of Assessment and Feedback

(within Assessment and Feedback Policy at: <https://www.strath.ac.uk/professionalservices/staff/policies/academic/>)

Assessment is by production of the feasibility study of a complete space mission from mission objectives to commissioning and operations.

The project will be assessed through three reviews mimicking the normal review process of real space missions. At each review feedback is provided directly to individual students by the assessors. During lectures, post review, more general feedback will be provided to the whole class. Failure to attend the reviews will result in loss of marks and feedback. Self and peer-directed feedback is also encouraged.

### Assessment Method(s) Including Percentage Breakdown and Duration of Exams (*individual weightings*)

Examination				Coursework		Practical		Project	
Number	Month(s)	Duration	Weighting	Number	Weighting	Number	Weighting	Number	Weighting
								1	Submitted in 3 parts: 25%, 25%, 50%
*				*		*		*LO1-3	

\* **LOs:** Indicate which Learning Outcomes (LO1, LO2, etc) are to be assessed by exam/coursework/practical/project as required.

### Coursework / Submissions deadlines (*academic weeks*):

Deadlines will be communicated in lectures

Submissions are exempt from Late Submission Policy due to in class review element.

### Resit Assessment Procedures:

Submission of a new feasibility study prior to the August exam diet.

**Students must contact the module Registrar for details as soon as results confirm that a resit is required.**

### PLEASE NOTE:

**Students must gain a summative mark of 50% to pass the module. Students who fail the module at the first attempt will be re-assessed prior to the August diet. This re-assessment will consist entirely of a coursework. No marks from any previous attempts will be transferred to a new resit attempt.**

**Recommended Reading****\*\*\*Purchase recommended    \*\*Highly recommended reading    \*For reference**

\*\* Griffin &amp; French, "Space Vehicle Design", ISBN 978-1563475399

\*\* Fortescue, Peter ; Stark, John ; Swinerd, Graham Spacecraft Systems Engineering4. Wiley 2011

\*\* Wertz, James Richard.; Larson, Wiley J.Space mission analysis and design, 3rd ed.. Microcosm; Dordrecht ; Boston : Kluwer c1999

**Additional Student Feedback***(Please specify details of when additional feedback will be provided)*

Date	Time	Room No
		Check timetable webpages for details

Session: 2021/22

**Approved:****Course Director Signature: E Henderson****Date of Last Modifications: 31/08/2021**

## MODULE TIMETABLE

Module Code:

**ME517**

Module Title:

**Spaceflight Systems**

### Brief Description of Assessment:

Feasibility study of a space mission. Three review during the course: Preliminary Design Review (PDR), up to 25 points, Mid-Term Review (MTR), up to 25 points, Consolidated Design Review (CDR), up to 50 points.

### Assessment Timing:-

Indicate on the table below the start/submission dates for each assignment/project and the timing of each exam/assessment using the dropdowns provided. Dropdowns can be left blank. Add extra notes below the dropdowns.

**Please note: Timings can and will change, this should only be used as a guide.**
