-  Accessible Routes External
-  Accessible Routes through Buildings (Weekdays 8.00am - 6.00pm)
-  Accessible Entrance
-  Non-Accessible Entrances
-  Public Car Parking, Pay and Display

OUR CAMPUS

Welcome to the University of Strathclyde! We have compiled this Self-Guided Tour Guide, which can be used on its own or alongside our helpful Campus Tour Podcast which can be downloaded from our website: www.strath.ac.uk/studywithus/undergraduate/beforeyouapply/visitingopportunities

The tour is customisable and the audio tour can start from anywhere around campus - simply choose the chapter most relevant to you i.e. the nearest to your location.

Your tour should take approximately 45 minutes.

1. The McCance Building

Opened in 1964, this building was originally the University library. Now it is the first point of contact for any Student Business and University Administration.

2. Rottenrow Gardens

This garden was built on the site of a former maternity hospital. One of its features is the 'Monument to Maternity', a seven-metre high stainless steel sculpture in the form of a giant nappy pin, designed by Scottish artist George Wyllie. It's a popular place for students and the general public to meet and socialise.

3. Livingstone Tower

The Mathematics & Statistics and Computer & Information Science schools can be found here.

4. Technology and Innovation Centre

The Technology and Innovation Centre (TIC) at Strathclyde is a hub for world-leading research, transforming the way academics, business, industry and the public sector collaborate. The TIC is also an award winning conference and event facility.

5. Graham Hills Building

Named after a former principal, this building is now home to the Psychology, Law, Sport and Physical Activity and Speech and Language Pathology schools.

6. Learning and Teaching Building

Our new Learning and Teaching building is a flagship facility with modern facilities to accommodate lectures and study spaces for the Strathclyde student community. It is also home to our student support services and our new students' union.

7. Sir William Duncan Building

This building is named after Glasgow-born Sir William Duncan who received an honorary degree from the University in 1978. Today this building is connected to the Strathclyde Business School on Cathedral Street. The majority of business departments are located within these buildings.

8. Callanish

This sculptor Gerald Laing was commissioned to create this public artwork on the highest natural point of the campus in the 1970s. Although named after the standing stones in the Western Isles, the 16 steel and concrete pillars are commonly called 'steelhenge' because of its similarity to the more famous Stonehenge.

9. John Anderson Building

The namesake of the University founder, this building houses the University's largest lecture theatre that is used by all faculties. It is also the base for the Physics department.

10. Barony

The Barony is a former church and home to Strathclyde's graduation ceremonies, the Great Hall is a stunning backdrop for the highlight of any student's time at Strathclyde as well as being a popular event facility.

11. Student Accommodation

The University works hard to place people with similar interests together. Each accommodation block is named after Professors of Natural Philosophy and former Principals.

12. SIPBS Building

Completed in 2010, the purpose built building is central to the aim of the institute to deliver speedier, more efficient drug discovery in its research and development.

13. Andersonian Library / Curran Building

Responsible for the universities archives, special collections and rare books. The University's founder John Anderson bequeathed his personal library of 1,500 volumes to the University in his will. The National Centre for Prosthetics and Orthotics is also based in this building.

14. Lord Hope Building

Named after Lord Hope of Craighead, a former Chancellor of the University and the inaugural Deputy President of the UK Supreme Court. The Lord Hope building has recently been refurbished to provide great new facilities for Humanities students.

15. Strathclyde Sport

Our Sports Centre opened in 2018. It is home to a range of great facilities for staff and students such as a 25 metre swimming pool, squash courts, fitness suite, sports halls and studio spaces. You can do exercise classes such as Zumba, Spin and Body Attack are available.

16. Strathclyde Business School

These two buildings have undergone a £23.2 million transformation to locate business studies in a single business quarter and provide state-of-the-art teaching facilities for our staff and students.

17. Henry Dyer Building

The Henry Dyer building is home to the Naval Architecture, Ocean and Marine Engineering department. The University of Strathclyde is one of only three institutes who offer Naval Architecture as a course choice in the UK.

18. James Weir Building

Most Engineering departments are based here. The James Weir building has also been featured in television and film - such as Taggart and Sea of Souls.

19. Thomas Graham Building

Home to the Chemistry department with some excellent laboratories located within this building.

21. The Royal College Building

The Royal College took nine years to complete, starting in 1903 when King Edward VII laid the foundation stone. It's Renaissance style reflects the civic pride of Glasgow at the time and once built, was the largest educational building built in the UK. Despite being the oldest building on campus, the Science and Engineering departments based here have embraced modern teaching styles with interactive classrooms and 3D prototyping facilities.
