

# Accelerate

## Computer Science Challenge 21st to 25<sup>th</sup> June 2021

Accelerate is a one-week programme, held at the University of Strathclyde, for pupils at the end of S4 and S5. It aims to provide a targeted focus on the pupils' chosen area of academic interest, giving them a head start on the road to their chosen career.

There are five areas that you can choose from in 2021, depending on your career aspirations:

- **Chemistry**
- **Chemical Engineering**
- **Computer Science**
- **Electronic & Electrical Engineering**
- **Product Design**

Teams of academic experts have put together week-long Challenges in each of these areas that will allow pupils to find out all about their area of interest and the career opportunities open to them. Led by undergraduate and postgraduate student mentors from the relevant fields, pupils will undertake a variety of group challenges, as well as attending career workshops and getting a chance to see what student life is like.

Accelerate 2021 will be run virtually on Microsoft Teams.

### The Computer Science Challenge: Outline

The Department of Computer and Information Science (CIS) at the University of Strathclyde will be hosting a challenge for up to 25 pupils.

### What will you be doing?

In teams, you will be asked to choose an area of health or lifestyle that you want to develop an interactive application for. This could be tracking your sleep, helping people exercise, helping people monitor their heart rate, a yoga app... Anything that would improve a person's life through technology. Your challenge will be to:

- **Come up with an original design idea to solve this problem**
- **Identify who your target users are**
- **Identify technical and user experience requirements for your product**
- **Develop a prototype of your application/device/system**
- **Build and test some of the functionality of your prototype**

You will have to take the idea from design concept through to a real prototype which showcases the innovative features of your device or application. We will support you in this by showing you how to create apps and helping you to program small devices that can automatically detect activity and send the data wirelessly back to the app on the user's computer, phone or tablet.

You will then pitch your idea to a panel of experts and the most innovative application or device that is most likely to change the way we live will be selected to win a prize.

University staff and professionals working in Computer Science will be on hand throughout the week as a resource of advice and information and to support you through your group tasks.

Our Computer Science careers presentations will also allow you to see the future opportunities available to you and the whole week will offer you a taste of what it is really like to study at University.

We are sure that this challenge will showcase how varied a degree and career in computer and information science is.

#### **Comments from previous Computer Science challenge participants:**

*"I enjoyed the programme and felt it helped to learn more about studying computing at university and helped me to learn more about the options available after university and what working in the industry involves."*

*"It was informative, fun and challenging. I got the opportunity to develop my creative skills. The mentors were really helpful. It was a wonderful experience overall."*

*"It was a fun and useful experience that has made me more confident in what university life is like."*

*"I enjoyed working with other people and finding out more about prospective careers."*

*"The mentors were really friendly and gave me the best advice on university and a deep insight into life at university."*
